

[illegible]

The diagram illustrates a communication system with two identical instances. On the left, a stick figure (sender) is enclosed in a box. An arrow points from this box to a large rectangular area in the center. This central area is filled with a dense, repeating pattern of small, illegible text, representing a noisy channel. Another arrow points from this central area to a second box on the right, which contains a stick figure (receiver). This structure is repeated on the right side of the diagram, showing a second identical communication system.

Three identical placeholder cards are shown side-by-side. Each card has a circular cutout at the top. The main body of each card contains a block of text represented by a series of horizontal lines of varying lengths, indicating audio content. At the bottom of each card, the text 'Play audio' is followed by a right-pointing triangle icon, which is a standard symbol for an audio player.
